Proc. Natl. Acad. Sci. U.S.A. 98:5515-5520(2001).

-i- FUNCTION: ELICITS GROWTH INHIBITION ON MELANOMA CELLS IN VITRO
AS WELL AS SOME OTHER NEUROECTODERMAL TUMORS, INCLUDING GLIOMAS.

-i- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Structure and promoter analysis of the gene encoding the human melanoma-inhibiting protein MIA.";

-:- SUBCELLULAR LOCATION: Secreted.

-:- TISSUE SPECIFICITY: ALL MALIGNANT MELANOMA CELL LINES.

INFREQUENTLY IN GLIOMA CELL LINES.

-:- PIM: MAY POSSESS TWO INTRAMOLECULAR DISULFIDE BONDS.

-:- SIMILARITY: BELONGS TO THE MIA / OTCR FAMILY.

-:- SIMILARITY: Contains 1 SH3 domain.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing the diagnosis and development of promoters and inhibitors angiogenesis. or treating bone and joint diseases as well as pathologic angiogenesis or treating bone and joint diseases as well as pathologic angiogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 6; Page 106; 111pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of a novel human growth regulatory-like polypeptide (GRLP). The amino acid sequence is predicted from a novel assembled cDNA (see AAH26343) based on Hyseq clone number novel assembled reprotein has a moliwt of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory protein growth factors, human melanoma derived growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive protein (CD-RAP, 44% identity acid sensitive prote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    similarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRLP polypeptides and polynucleotides of the invention can be used in the prophylaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as gliomas. The polypeptides, which include the GRLP mature protein, may also have nutritional uses, cytokine and cell proliferation or differentiation activity, stem cell growth factor activity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 10; Page 116-117; 119pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                    The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restensis, rheumatoid arthritis, argina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a PRO protein of the invention.
                                                                                                                                        One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal -
                                                                                                                                                                                                                    Godowski PJ,

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to CC ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, CC antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic CC activities, and can be used in gene therapy. The PRO polynucleotides, CC proteins, agonists and antagonists are useful for treating or diagnosing CC proteins, agonists and antagonists are useful for treating or diagnosing CC a cardiovascular, endothelial or angiogenic disorder in a mammal, CC e.g. cardiac hypertrophy, trauma, cancer, age-related macular CC degeneration, atherosclerosis, hypertension, arterial restenosis, thrombophlebitis, CC rheumacoid arthritis, angina, myocardial infarctions, thrombophlebitis, CC lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications consonne and gene mapping. ABL88259 to ABL88267 represent primers and CC probes used in the exemplification of the present invention.

The invention relates to one hundred and twenty two nucleic acids CC encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides CC encode human secreted proteins. The PRO nucleic acids, polypeptides, CC agonists and antagonists are useful for treating a PRO related disorder. CC cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or CC cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or CC liver tumour. The PRO polypeptides are useful for stimulating the CC liver tumour. The PRO polypeptides are useful for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal for stimulating or inhibiting the proliferation of normal human dermal for stimulating the PRO polypeptide may also be used as molecular CC eaphications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. AAU83592-AAU83713 represent human PRO protein sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO200208288-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-JUL-2000;

The invention relates to an isolated novel secreted polypeptide (I) and (II) are useful for treating cancer. CC polymuclectide (II). (I) and (III) are useful for treating cancer. CC autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility; neurological and CC disorders, inflammatory disorders, infertility; neurological and CC psychiatric diseases, cardiovascular diseases, respiratory diseases, CC renal diseases, or gastrointestinal diseases. These may also be used to CC treat diseases, abnormalities and disorders caused by abnormal CC expression, production, function and/or metabolism of the genes, as conceined to inducing immunological response in a mammal, and in CC expression, production in the effect of added compounds on the conceining methods for detecting the effect of added compounds on the conceining methods for detecting the effect of added compounds on the conceining methods and polypeptide in cells. The polypeptides can be used production of mRNA and polypeptide in cells. The polypeptides, can be used to identify membrane-bound or soluble receptors. The polypucleotides can be used to identify membrane-bound or soluble receptors. The polypucleotides, can be used as diagnostic reagents, in chromosome localisation studies, amino acid sequence of novel human secreted protein #12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Secreted protein; cytostatic; immunosuppressive; vulnerary; vaccine; antiinflammatory; neuroprotective; nephrotropic; cardiovascular; human; cancer; autoimmune disease; wound healing disorder; infection; haematopoietic disorder; inflammatory disorder; infertility; neurological disease; psychiatric disease; cardiovascular disease; neurological disease; psychiatric disease;

                                                                                                                                                                                                                                                                                                                                                                                The present invention describes novel MIP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     inhibitor
                                                                                                                                                                                                                                                                                                                  The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. cc growth factors, human melanoma derived growth regulatory protein cc growth factors, human melanoma derived growth regulatory protein cc growth factors (64 % similarity and 45% identity over 11 amino acids) cc precursor (64 % similarity and 45% identity over 11 amino acids) cc retinoic acid sensitive protein (CD-RAP, 44% identity and 64% cc similarity over 126 amino acids) and other retinoic acid-sensitive cc growths. GRIP polypeptides and polynucleotides of the invention cc and diagnosis of disorders and diseases caused by, or involving, cc and diagnosis of disorders and diseases caused by, or involving, cc and diagnosis of disorders and diseases caused by, or involving, cc growth and tumours, including neuroectodermal tumours such as cc growth and tumours, including neuroectodermal tumours such as cc gliomas. The polypeptides, which include the GRLP mature protein, cc may also have nutritional uses, cytokine and cell proliferation and also have nutritional uses, cytokine and cell proliferation and also have nutritional uses, cytokine and cell proliferation in adiabonic regulating activity, tissue growth factor activity, acemactaric arminosuppressive or immunostimulant activity, activin/inhibin immunosuppressive or immunostimulant activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of a novel human growth regulatory-like polypeptide (GRLP) mature protein. The sequence is predicted from a novel assembled cDNA (see AAH26343) based on Hyseq clone number 16372272. The protein has a mol.wt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB; AAH26343.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and diagnoses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNAS. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. Antibodies raised against the protein can be used to detect cell producing the protein and also for protein purification. Probes derived from DNA encoding the protein (AAQB4050, AAQB4051) can be used to detect sequences encoding the protein or related proteins. The protein may be expressed as a fusion protein (conjugated with dihydrofolate reductase (DHFR)). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-JUL-1994;
